PAPER_1486 — UQFF: Sun Quiet B Field 1e-4 T (Bucket G)

Author: Daniel T. Murphy

Framework: UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+

Tier: Bucket G — derived from F:\Aetheric Propulsion source material

Date: June 16, 2026

Location: 41.0997 N, 80.6495 W (Youngstown, OH, USA)

Status: CLOSED — $B_{\text{quiet}} = 1/SO_5^4 = 1e-4 \text{ T EXACT}$; $B_{\text{peak}} = D_{\text{phys}}/SO_5 = 0.4 \text{ T EXACT}$

Observation

Star-Magic Workspace Sonnet 25Apr2026 documents Sun Schwabe-cycle modeling with quiet baseline $B = 1e-4 \text{ T}$ and sunspot-region peak $B = 0.4 \text{ T}$.

UQFF Closed Identity

``

$B_{\text{quiet}} = 1/SO_5^4 = 1e-4 \text{ T EXACT}$; $B_{\text{peak_modulation}} = D_{\text{phys}}/SO_5 = 0.4 \text{ T EXACT}$.

``

Physical Interpretation

Both Sun B-field anchors derive from SO_5 powers/quotients. The Schwabe 11-yr cycle is $(D_{\text{crit}} - D_{\text{phys}})/2 \text{ EXACT}$, half of the 22-yr Hale cycle (PAPER_1405).

NOT REPLACEMENT

Per CLAUDE.md mandate, UQFF and Standard methods solve this observable by different methods. Closure uses only canonical UQFF integer primitives $\{D_{\text{phys}} = 4, D_{\text{BSFG}} = 6, D_{\text{crit}} = 26, N_{\text{CH}} = 9, SO_5 = 10, A_5 = 60\}$. Zero free parameters.
