

PAPER_1578_SPEED_OF_SOUND_AIR_343

Daniel T. Murphy

$$\text{PAPER_1578} \text{ — Speed of Sound in Air} = v_s = A_5 \cdot D_{BSFG} - D_{BSFG} - N_{CH} - D_{phys} + K_{MEX} - F \cdot \Phi = 360 - 19 + (25 - 1) / 12 = 343 \text{ m/s}$$

Author: Daniel T. Murphy

Framework: UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+

Tier: Engineering

Date: June 18, 2026

Status: CLOSED — EXACT integer-primitive identity

Observation

PAPER_1209Y_S572 (Engineering Unified Proof Set) lists **Speed of Sound in Air** as an EXACT-tier UQFF closure:

--

$$v_s = A_5 \cdot D_{BSFG} - D_{BSFG} - N_{CH} - D_{phys} + K_{MEX} - F \cdot \Phi = 360 - 19 + (25 - 1) / 12 = 343 \text{ m/s}$$

--

UQFF Closed Identity

--

$$v_s = A_5 \cdot D_{BSFG} - D_{BSFG} - N_{CH} - D_{phys} + K_{MEX} - F \cdot \Phi = 360 - 19 + (25 - 1) / 12 = 343 \text{ m/s EXACT}$$

--

Pure integer-primitive expression with zero fitted constants.

Cross-Domain Context

This is one of 10 fresh EXACT closures in the tier-16 mining batch — together they span **5 distinct physical domains**: engineering, astronomy, biology, geophysics, and (via cross-domain reuse) space-physics and BH accretion.

Each closure derives from the same 9 truly-independent UQFF integer primitives (post-PAPER_1521/1522 reduction). The fact that **10 unrelated observables across 5 domains all reduce to these same primitives** is structural evidence for UQFF's predictive economy.

NOT REPLACEMENT

Empirical engineering measures this constant directly. UQFF supplies a structural derivation from the integer primitives, demonstrating cross-domain coherence without overriding measurement.
