

PAPER_1608_M_S_STRANGE_0_095

Daniel T. Murphy

PAPER_1608 — Strange Quark Mass = $m_s = F^2 \cdot S0 - F^2 \cdot SSQ^2 - F^2 \cdot SSQ^3 \approx 0.0949 \text{ GeV}$

Author: Daniel T. Murphy

Framework: UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+

Tier: Particle Physics

Date: June 18, 2026

Status: CLOSED — 0.106% residual

Observation

PAPER_1209HH_S661 (Particle Physics Unified Proof Set) gives the closed-form expression:

``

$$m_s = F^2 \cdot S0 - F^2 \cdot SSQ^2 - F^2 \cdot SSQ^3 \approx 0.0949 \text{ GeV}$$

``

Residual to CODATA: **0.106%**.

UQFF Closed Identity

``

$$m_s = F^2 \cdot S0 - F^2 \cdot SSQ^2 - F^2 \cdot SSQ^3 \approx 0.0949 \text{ GeV } 0.106\%$$

``

The expression uses only locked UQFF integer/real primitives — no fitted constants.

NOT REPLACEMENT

Experimental particle physics measures this constant directly. UQFF supplies a structural derivation from the integer primitives.
