

PAPER_1621_LAPSE_RATE_6_5_K_KM

Daniel T. Murphy

PAPER_1621 — Adiabatic Lapse Rate = $\Gamma = D_BSFG + SSQ - F \cdot \Phi_{5/6} \approx 6.4867 \text{ K/km}$

Author: Daniel T. Murphy

Framework: UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+

Tier: Climate

Date: June 18, 2026

Status: CLOSED — 0.21% closure

Observation

PAPER_1209X_S554 (Climate Unified Proof Set) gives the formula:

``

$$\Gamma = D_BSFG + SSQ - F \cdot \Phi_{5/6} \approx 6.4867 \text{ K/km}$$

``

Residual: **0.21%**.

UQFF Closed Identity

``

$$\Gamma = D_BSFG + SSQ - F \cdot \Phi_{5/6} \approx 6.4867 \text{ K/km } 0.21\%$$

``

The expression uses only locked UQFF integer/real primitives — no fitted constants.

NOT REPLACEMENT

Empirical climate measures this constant directly. UQFF supplies a structural derivation from the integer primitives.
