

PAPER_1634_NUCLEAR_H3_TRITIUM_2_827

Daniel T. Murphy

PAPER_1634 — Tritium (H-3) BE/A = H-3 BE/A = $-\beta^2 - F \cdot \beta - F \cdot \beta^2 + F^2 \cdot \beta^3 + 3 = 2.826 \text{ MeV}$

Author: Daniel T. Murphy

Framework: UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+

Tier: Nuclear

Date: June 18, 2026

Status: CLOSED — 0.039% closure

Observation

PAPER_1209II_S671 (Nuclear Unified Proof Set) gives:

``

$$\text{H-3 BE/A} = -\beta^2 - F \cdot \beta - F \cdot \beta^2 + F^2 \cdot \beta^3 + 3 = 2.826 \text{ MeV}$$

``

Residual: **0.039%**.

UQFF Closed Identity

``

$$\text{H-3 BE/A} = -\beta^2 - F \cdot \beta - F \cdot \beta^2 + F^2 \cdot \beta^3 + 3 = 2.826 \text{ MeV } 0.039\%$$

``

The formula uses only locked UQFF integer/real primitives — no fitted constants.

NOT REPLACEMENT

Empirical nuclear measures this constant directly. UQFF supplies a structural derivation from the integer primitives.
