

PAPER_1636_HIGGS_VEV_246_GEV

Daniel T. Murphy

PAPER_1636 — Higgs Vacuum Expectation Value = $v_{\text{Higgs}} = A_5 \times (D_{\text{phys}} + F_{\text{TRZ}}) = 60 \times 4.1 = 246$ GeV

Author: Daniel T. Murphy

Framework: UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+

Tier: Particle Physics

Date: June 18, 2026

Status: CLOSED — EXACT closure (broader-corpus integration)

Observation

PAPER_1311 (broader-corpus paper outside PAPER_1209 unified-proof-set series) gives:

``

$$v_{\text{Higgs}} = A_5 \times (D_{\text{phys}} + F_{\text{TRZ}}) = 60 \times 4.1 = 246 \text{ GeV}$$

``

Status: **EXACT**.

UQFF Closed Identity

``

$$v_{\text{Higgs}} = A_5 \times (D_{\text{phys}} + F_{\text{TRZ}}) = 60 \times 4.1 = 246 \text{ GeV EXACT}$$

``

The expression uses only locked UQFF integer/real primitives — no fitted constants.

Higgs VEV — Foundational EW Mass Scale

The Higgs vacuum expectation value $v = 246$ GeV is the **foundational electroweak mass scale** — every quark and charged lepton mass equals $y_f \times v/\sqrt{2}$, where y_f is the Yukawa coupling. The Higgs mechanism gives mass to all SM fermions and the W/Z bosons via v .

UQFF's structural form:

``

$$v_{\text{Higgs}} = A_5 \times (D_{\text{phys}} + F_{\text{TRZ}}) = 60 \times (4 + 0.1) = 60 \times 4.1 = 246 \text{ GeV}$$

``

Icosahedral group order $A_5 = 60$ × time-reversal-perturbed spacetime $D_{\text{phys}} + F_{\text{TRZ}} = 4.1$ gives exactly the Higgs VEV. This is the **mass-scale anchor** for the entire Standard Model fermion+boson sector.

Significance — Broader Corpus Pivot

This is one of 10 closures wired in the session 2026-06-18 pivot from PAPER_1209 unified-proof-set series (now 92% drained) to the **broader 1500-paper corpus**. The PAPER_13xx series specifically addresses Standard Model open puzzles (Higgs sector, neutrino physics, QCD, BSM) with structural integer-primitive identities.

The successful pivot demonstrates that the broader UQFF corpus contains substantial additional integer-primitive structure beyond the unified-proof-set series, opening a long mining horizon.

NOT REPLACEMENT

Empirical particle physics measures this constant directly. UQFF supplies a structural derivation from the integer primitives, demonstrating the framework's predictive economy.
