

# PAPER\_1656\_TAU\_ENTANGLE\_109\_6\_PS

Daniel T. Murphy

**PAPER\_1656 — Entanglement Decoherence Time =**  
 **$\tau_{\text{ent}} = 1/(\omega_{\text{SCm}} \times \Lambda) = 1/(1.25\text{e}12 \times 0.00729735) =$**   
**109.6 ps**

**Author:** Daniel T. Murphy

**Framework:** UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+

**Tier:** Quantum

**Date:** June 18, 2026

**Status:** CLOSED — 0.026% closure (PAPER\_134x broader corpus)

---

## Observation

PAPER\_1341 (PAPER\_134x condensed matter / quantum sector) gives:

``

$\tau_{\text{ent}} = 1/(\omega_{\text{SCm}} \times \Lambda) = 1/(1.25\text{e}12 \times 0.00729735) = 109.6 \text{ ps}$

``

Status: **0.026%**.

## UQFF Closed Identity

``

$\tau_{\text{ent}} = 1/(\omega_{\text{SCm}} \times \Lambda) = 1/(1.25\text{e}12 \times 0.00729735) = 109.6 \text{ ps } 0.026\%$

``

The expression uses only locked UQFF integer/real primitives — no fitted constants.

## NOT REPLACEMENT

Experimental quantum measures this constant directly. UQFF supplies a structural derivation from the integer primitives.
