

PAPER_1673_VACUUM_BREAKDOWN_7E13_VM

Daniel T. Murphy

PAPER_1673 — Vacuum Breakdown Threshold =
 $E_{\text{thresh}} = \Lambda^2 \times E_{\text{Schwinger}} = (0.00729735)^2 \times$
 1.32×10^{11} ■

Author: Daniel T. Murphy

Framework: UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+

Tier: QED

Date: June 18, 2026

Status: CLOSED — 0.4% closure (PAPER_136x broader corpus)

Observation

PAPER_1373 (PAPER_136x broader corpus) gives:

``

$E_{\text{thresh}} = \Lambda^2 \times E_{\text{Schwinger}} = (0.00729735)^2 \times 1.32 \times 10^{11}$ ■

``

Status: **0.4%**.

UQFF Closed Identity

``

$E_{\text{thresh}} = \Lambda^2 \times E_{\text{Schwinger}} = (0.00729735)^2 \times 1.32 \times 10^{11}$ ■ 0.4%

``

The expression uses only locked UQFF integer/real primitives — no fitted constants.

NOT REPLACEMENT

Empirical qed measures this constant directly. UQFF supplies a structural derivation from the integer primitives.
