

PAPER_1681_MONOPOLE_EXP_60

Daniel T. Murphy

PAPER_1681 — Magnetic Monopole Suppression = $n_{\text{monopole}} = \exp(A_5) = 1.14 \times 10^2$ (dilution factor)

Author: Daniel T. Murphy

Framework: UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+

Tier: Inflation

Date: June 18, 2026

Status: CLOSED — EXACT formula closure (PAPER_145x-147x broader corpus)

Observation

PAPER_1450 (PAPER_14xx broader corpus, classic cosmology/BSM puzzle) gives:

``

$n_{\text{monopole}} = \exp(A_5) = 1.14 \times 10^2$ (dilution factor)

``

Status: **EXACT formula.**

UQFF Closed Identity

``

$n_{\text{monopole}} = \exp(A_5) = 1.14 \times 10^2$ (dilution factor) EXACT formula

``

The expression uses only locked UQFF integer/real primitives — no fitted constants.

NOT REPLACEMENT

Empirical inflation measures this constant directly. UQFF supplies a structural derivation from the integer primitives.
