

PAPER_1702_SUM_BETA_I_3_2

Daniel T. Murphy

PAPER_1702 — $\sum \beta_i (i=1..4)$ Triangular Sum = $\sum_{i=1}^4 3(5-i)/20 = 3/2$

Author: Daniel T. Murphy

Framework: UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+

Tier: UQFF Foundational

Date: June 18, 2026

Status: CLOSED — EXACT closure (PAPER_115x-117x foundational)

Observation

PAPER_1165 (PAPER_115x-117x foundational corpus) gives:

``

$$\sum_{i=1}^4 3(5-i)/20 = 3/2$$

``

Status: **EXACT**.

UQFF Closed Identity

``

$$\sum_{i=1}^4 3(5-i)/20 = 3/2 \text{ EXACT}$$

``

The expression uses only locked UQFF integer/real primitives — no fitted constants.

NOT REPLACEMENT

Standard frameworks address this differently. UQFF supplies a structural integer-primitive form.
