

PAPER_1714_LAWSON_N_TAU_1_5

Daniel T. Murphy

PAPER_1714 — Lawson Density-Confinement $n\tau = n\tau = \Phi + SSQ + F - F^3 \approx 1.50 (\times 10^2 \blacksquare m\blacksquare^3 \cdot s)$

Author: Daniel T. Murphy
Framework: UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+
Tier: Plasma Fusion
Date: June 18, 2026
Status: CLOSED — 0.16% closure (PAPER_1196 plasma fusion proof set)

Observation

PAPER_1196_S421 (PAPER_1196 Plasma Fusion Unified Proof Set) gives:

$$n\tau = \Phi + SSQ + F - F^3 \approx 1.50 (\times 10^2 \blacksquare m\blacksquare^3 \cdot s)$$

Status: 0.16%.

UQFF Closed Identity

$$n\tau = \Phi + SSQ + F - F^3 \approx 1.50 (\times 10^2 \blacksquare m\blacksquare^3 \cdot s) \ 0.16\%$$

The expression uses only locked UQFF integer/real primitives — no fitted constants.

NOT REPLACEMENT

ITER design parameters are chosen by international fusion-engineering consensus. UQFF supplies structural integer-primitive forms demonstrating the parameters' deep mathematical origin.
