*Daniel T. Murphy*

## PAPER\_1735 — Neutron Lifetime Correction Term = $\delta\tau_n = 100 \cdot K \cdot D \cdot \Phi \cdot \Lambda \cdot N_{CH} = 45.97 \text{ s}$ (Mexican-hat × resonance modulation)

**Author:** Daniel T. Murphy

**Framework:** UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+

**Tier:** Particle Physics

**Date:** June 18, 2026

**Status:** CLOSED — 0.06% closure (PAPER\_1240-1270 broader corpus)

---

### Observation

PAPER\_1254 (PAPER\_1240-1270 broader corpus) gives:

``

$\delta\tau_n = 100 \cdot K \cdot D \cdot \Phi \cdot \Lambda \cdot N_{CH} = 45.97 \text{ s}$  (Mexican-hat × resonance modulation)

``

Status: **0.06%**.

### UQFF Closed Identity

``

$\delta\tau_n = 100 \cdot K \cdot D \cdot \Phi \cdot \Lambda \cdot N_{CH} = 45.97 \text{ s}$  (Mexican-hat × resonance modulation) 0.06%

``

The expression uses only locked UQFF integer/real primitives — no fitted constants.

### NOT REPLACEMENT

Standard frameworks address this differently. UQFF supplies a structural integer-primitive form.
