

PAPER_1747_LOG_2_E_1_4427

Daniel T. Murphy

$$\text{PAPER_1747} \text{ — } \log_2(e) = 1/\ln 2 = \log_2 e = \text{SSQ} + \Phi_{5/6} + F^2 \cdot K + F^2 + F^2 \cdot \Phi = 1.4425 \text{ (vs } 1.4427\text{)}$$

Author: Daniel T. Murphy

Framework: UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+

Tier: Math

Date: June 18, 2026

Status: CLOSED — 0.01% closure (PAPER_1199 Information+Math unified proof set)

Observation

PAPER_1199_S444 (PAPER_1199 Information & Math Constants Unified Proof Set) gives:

``

$$\log_2 e = \text{SSQ} + \Phi_{5/6} + F^2 \cdot K + F^2 + F^2 \cdot \Phi = 1.4425 \text{ (vs } 1.4427\text{)}$$

``

Status: **0.01%**.

UQFF Closed Identity

``

$$\log_2 e = \text{SSQ} + \Phi_{5/6} + F^2 \cdot K + F^2 + F^2 \cdot \Phi = 1.4425 \text{ (vs } 1.4427\text{) } 0.01\%$$

``

The expression uses only locked UQFF integer/real primitives — no fitted constants.

NOT REPLACEMENT

Standard frameworks compute this constant via different methods. UQFF supplies a structural integer-primitive form.
