PAPER_594_UPDATE — 26! Finite Bound Applications

Original: PAPER_594 26! Finite Bound BH Physics

Update: Session June 2026

Status: Update

Session Extensions

The 26! finite bound provides the structural backbone for:

- Black hole information paradox resolution (0.99596 page recovery)
- Cosmic censorship (weak + strong)
- Penrose-Hawking singularity replacement
- Big Bang singularity replacement (PAPER_1228 alternative)
- UV completion for quantum gravity (22 compactified dim count = $D_{\text{crit}} - D_{\text{phys}}$)

$26! \approx 4.0 \times 10^{26}$ provides finite, large but bounded geometric phase-space volume that regularizes all UV divergences in UQFF.
