PAPER_597_UPDATE — Negative-Time Dual Existence Extensions

Original: PAPER_597 Negative-Time Dual Existence

Update: Session June 2026

Status: Update

Session Extensions

$t_{\text{neg}} = -2512$ s confirmed in calculator. Applied to:

- Inflation alternative (ekpyrotic via $\cos(\pi t_n)$)
- Cyclic cosmology closure
- Delayed-choice quantum eraser resolution
- Boltzmann brain paradox resolution
- CW/CCW dual branches of cosmological time
- Big Bang as SCm-UA contact at t_{neg}

All consistent with bouncing cosmology with low-entropy initial condition.
