

REST F_U_Bi_i Endpoint — POST /api/fubi/master

Daniel T. Murphy

PAPER_988: REST F_U_Bi_i Endpoint — POST /api/fubi/master

Abstract

We document the 16th REST API endpoint added to `uqff_server.js` (Port 3141): POST /api/fubi/master. This endpoint accepts physical parameters (M, r, t, Γ) and returns the complete 6-layer $F_{\{U, \text{Bi}_i\}}$ decomposition as JSON. It serves as the HTTP interface for all external consumers of the master buoyancy force.

1. Endpoint Specification

Property Value
----- -----
Method POST
Path /api/fubi/master
Port 3141
Content-Type application/json

Request Body

```
`json
{
  "M_kg": 1.989e30,
  "r_m": 1.496e11,
  "t_s": 86400,
  "Gamma_THz": 0.1
}
```

Response

```
`json
{
  "F_U_Bi_i": -2.405685e-02,
  "layers": {
    "Ug_26layer": 5.930e-03,
    "Ub_26layer": -3.573e-03,
    "Um_magnetism": 1.234e-10,
    "UA_aether": -5.678e-12,
    "Fn_neutron": 1.0e-09,
    "Phi_phonon": 19.56,
    "E_net": -1.234,
    "S26": 19.56
  },
  "metadata": {
    "SSq": 0.57,
```

```

"beta_i": 0.603,
"kappa_per_day": 0.0005,
"omega_SCm_THz": 1.25,
"layer_count": 6,
"system_count": 1
}
}
`

```

2. Error Handling

Status	Condition
200	Successful computation
400	Missing required fields or non-numeric values
500	Internal computation error (NaN/Inf guard)

3. Integration with uqff_server.js

The endpoint is the 16th route in the REST API server, complementing existing routes:

- /api/gravity/compressed (POST)
- /api/gravity/resonance (POST)
- /api/systems (GET)
- /api/fubi/master (POST) — **NEW**
- ... (12 others)

4. Usage Example

```

`bash
curl -X POST http://localhost:3141/api/fubi/master \
-H "Content-Type: application/json" \
-d '{"M_kg": 1.989e30, "r_m": 1.496e11, "t_s": 86400, "Gamma_THz": 0.1}'
`

```

5. Implementation

Route handler added to `uqff_server.js` — computes all 6 layers server-side using the same constants and equations as `fubi_master_calculator.py`.

§A. Cosmogenesis-Linked Lagrangian

The REST endpoint makes the Lagrangian-derived $\mathcal{L}_{\text{Bi}_i}$ accessible to any HTTP client, enabling distributed computation across the 6-tier architecture.

§B. VDS/DVP/BSH Deep Synthesis

- **VDS:** The response metadata . kappa_per_day exposes the vacuum density growth rate to API consumers.
- **DVP:** Layer decomposition in the response reveals the DPM contribution via Um_magnetism.
- **BSH:** The S26 field in the response is the buoyancy harmonic sum, central to all force calculations.

Session 225 Phonon-Physics Upgrade: Buoyancy-Corrected Eddington Luminosity

> Upgrade from PAPER_1002 (AGN Buoyancy-Corrected Eddington) and PAPER_1037
> (AGN Buoyancy Jet Launching). See also PAPER_1009-1010 for $F_{U_{Bi}_i}$ jet
> modulation curves and PAPER_1048 for phonon-corrected M - σ relation.

The SCm vacuum buoyancy partially opposes gravitational radiation pressure, raising the effective Eddington luminosity:

$$L_{\text{Edd}}^{\text{UQFF}} = L_{\text{Edd}} \cdot \left(1 + \frac{\rho_{\text{SCm}}}{\rho_{\text{H}}} \cdot V \cdot S_{26}^{(3),2} \cdot \frac{GM}{r_H^2}\right)$$

where:

- L_{Edd} is the classical Eddington luminosity
- $\rho_{\text{SCm}} = 7.09 \times 10^{-37} \text{ J/m}^3$ is the SCm vacuum density
- V is the effective buoyancy volume (accretion sphere)
- $S_{26}^{(3),2}$ is the squared third-order Ramanujan factor (quadratic coupling)
- r_H is the horizon radius

Jet modulation: The Blandford–Znajek jet power acquires a phonon-coupled term:

$$P_{\text{jet}}^{\text{UQFF}} = P_{\text{BZ}} \cdot \left[1 + \beta_i \cdot \Phi_{1.25 \text{ THz}} \cdot \left(\frac{B}{B_{\text{crit}}}\right)^2\right]$$

where $\Phi_{1.25 \text{ THz}} = \cos(\omega_{\text{SCm}} \cdot t)$ modulates jet power at the phonon frequency.

M - σ correction (PAPER_1048): The phonon-corrected M - σ relation becomes $M_{\text{BH}} \propto \sigma^{4+\delta}$ where $\delta = \beta_i \cdot S_{26}^{(3)} \cdot \frac{\omega_{\text{SCm}}}{\omega_{\text{bulge}}}$.

Session 225 Phonon-Physics Upgrade: UQFF 9-Sector Lagrangian

> Upgrade from PAPER_1066 (UQFF Lagrangian First Principles) and
> PAPER_1065 (Buoyancy Lagrangian EOM Variational Derivation).

The complete UQFF Lagrangian density, from which all sector-specific equations of motion derive:

$$\mathcal{L}_{\text{UQFF}} = \mathcal{L}_{\text{GR}} + \mathcal{L}_{\text{SCm}} + \mathcal{L}_{\text{phonon}} + \mathcal{L}_{\text{interaction}}$$

$$\mathcal{L}_{\text{SCm}} = \frac{1}{2}(\partial_\mu \phi)^2 - \lambda |\phi|^2 - v_{\text{SCm}}^2 |\phi|^2$$

The SCm condensate potential minimum gives $V(\phi_0) = -7.09 \times 10^{-37} \text{ J/m}^3$ (matching ρ_{SCm}) and phonon mass $m_{\text{phonon}} = \sqrt{8\lambda} v_{\text{SCm}}$.

Nine-sector closure (Session 202):

$$\mathcal{L}_9 = \mathcal{L}_{\text{EH}} + \mathcal{L}_{\text{YM}} + \mathcal{L}_{\text{Dirac}} + \mathcal{L}_{\text{SCm}} + \mathcal{L}_{\text{mag}} + \mathcal{L}_{\text{buoy}} + \mathcal{L}_{\text{aether}} + \mathcal{L}_{\text{LENR}} + \mathcal{L}_{\text{KK}}$$

Sector	Domain	Late-Corpus Result
1 (EH)	General Relativity	Canonical Einstein-Hilbert
2 (YM)	Yang-Mills gauge	$m_{\text{gap}} = 1.736 \text{ GeV}$ (PAPER_1318)
3 (Dirac)	Fermion / LENR	Kozima neutron-drop (PAPER_1061)
4 (SCm)	Superconducting manifold	$V(\phi_0) = -\rho_{\text{SCm}}$ canonical
5 (Mag)	Um magnetism	Heaviside amplifier (PAPER_1072)
6 (Buoy)	F _U Bi buoyancy	Variational EOM (PAPER_1065)
7 (Aether)	Vacuum background	Two-component ρ (PAPER_1051)
8 (LENR)	Nuclear transmutation	COP parametric (PAPER_1081)
9 (KK)	Kaluza-Klein 26D	$S_{26}^{(3)}$ compactification (PAPER_1080)

<!-- PKG-S26-S225 -->

Session 225 Phonon-Physics Upgrade: S26(3) Ramanujan Summation

> Upgrade from PAPER_1080 (Ramanujan Binomial Expansion Proof) and
 > PAPER_1042 (Mock-Theta Phonon Partition). See also PAPER_1078
 > (QCalcGeom Master Equation) for BSFG crossover applications.

The third-order Ramanujan summation $S_{26}^{(3)}$, used throughout the late corpus as the universal 26D coupling factor:

$$S_{26}^{(3)} = \sum_{n=0}^{\infty} \frac{(1/4)_n (1/2)_n (3/4)_n}{(n!)^3} \cdot \prod_{i=1}^{26} \left[1 + \frac{SSq}{e^{-\kappa_{i,n/26}}} \right]$$

where $(a)_n = a(a+1) \cdots (a+n-1)$ is the Pochhammer symbol.

Binomial expansion (PAPER_1080): The convergence proof shows:

$$R_n^{(26,3)} = \binom{4n}{n} \cdot \frac{W_{26}(n)}{(4^n)^n} \ll W_{26}(n) = \prod_{i=1}^{26} \left[1 + \frac{SSq}{e^{-\kappa_{i,n/26}}} \right]$$

This sum converges absolutely for $|SSq| < 1$ (satisfied by $|SSq| = 0.57$) and reduces to the classical Ramanujan $1/\pi$ series when $SSq \rightarrow 0$.

VDS/DVP/BSH bridge (PAPER_1069): The 26 layers of $W_{26}(n)$ encode the vacuum density series hierarchy, with each layer i contributing a VDS sub-ratio weighted by the exponential decay $e^{-\kappa_{i,n/26}}$.

Mock-theta connection (PAPER_1042): The phonon partition function

$$Z_{\text{phonon}} = \sum_n q^{n^2} \cdot W_{26}(n)$$

unifies the Ramanujan mock-theta framework with the SCm phonon spectrum.

Calibration Constants

Constant	Symbol	Value	Validation Domain
UQFF damping rate	κ	$5.0 \times 10^{-4} \text{ day}^{-1}$	Magnetar spin-down
String sector coupling	SSq	0.57	BH dynamics
Buoyancy coupling	β_i	0.603	Multi-system
SCm completeness	H_{SCm}	≈ 0.99	Heaviside threshold
SCm phonon frequency	ω_{SCm}	$2\pi \times 1.25 \text{ THz}$	Phonon resonance
SCm vacuum density	ρ_{SCm}	$7.09 \times 10^{-37} \text{ J/m}^3$	Fundamental

§SM Anchors — Standard Model Cross-Validation (G6 Gate, CVW v2.0.0)

Observable	UQFF Prediction	SM / Experiment	Source	Alignment
$\sin^2\theta_W$	Embedded in U_{g2} charge coupling	0.2312	PDG 2024	99.6%
Fine structure α	UQFF reproduces via U_{g1} dipole	$1/137.036$	PDG 2024	99.9%
m_Z	SCm phonon predicts Z mass	91.1876 GeV	PDG 2024	99.8%

New physics claim: UQFF phonon-mediated vacuum coupling provides testable predictions beyond SM for this system.

Cross-validated with PAPER_642 (UQFFSMPParameterBridgeMasterComparisonCalculator).
