Abstract

This paper presents the Unified Quantum Force Field (UQFF) calculations for five astrophysical systems: Messier 82 (Cigar Galaxy), IC418 (Spiral Galaxy), Canis Major R136 (super star cluster), NGC6302 (Butterfly Nebula), and NGC7027 (planetary nebula). The framework extends the DPM (Dark Photon Medium) theory to include Universal Gravity components U_g1, U_g3, Universal Magnetism U_m, Electric Field E, and Neutron Production Rate . All calculations use the Self-Expanding Framework 2.0 and conform to the UQFF canonical data flow through source2.cpp → APIFetch.py → CondensedPhysics.py.

1. Theoretical Framework

1.1 UQFF Force Components

The UQFF framework decomposes gravitational interaction into quantum field components:

U_g1 (DPM Force — Coulomb Analog):

$$U_{g1} = k_1 \sum_j \frac{f'_{UA}(Z_j)}{r_j^2} \cdot f_\nu(Z)$$

where $f'_{UA} = (Z_{max} - Z)/Z_{max}$ is the vacuum asymmetry factor, $Z_{max} = 1000$, $f_\nu = 1 + \sin(\pi\nu_{THz}/\nu_0)$ is the THz resonance suppression factor.

U_m (Universal Magnetism with Heaviside Polarity):

$$U_m = k_m \cdot B \cdot f'_{UA} \cdot f_{SCm} \cdot H(f'_{UA})$$

where $f_{SCm} = Z/Z_{max}$ is the superconducting magnetism factor and $H(\cdot)$ is the Heaviside step function enforcing physical polarity.

U_g3 (Composite Force):

$$U_{g3} = k_{g3}(U_i + U_m), \quad U_i = R_{EB} \cdot E, \quad R_{EB} = k_R \cdot Z$$

Electric Field E:

$$E = k_e \cdot \frac{\rho_{vac}}{r^2} \cdot f'_{UA} \cdot N_{quantum}$$

where $N_{quantum} = 26$ (matching the 26-dimensional UQFF polynomial framework).

Neutron Production Rate :

$$\eta = K_{\eta,base} \cdot f'_{UA} \cdot f_{SCm} \cdot \sqrt{B/\rho_{vac}}$$

with $K_{\eta,base} = 2.75 \times 10^8$, $\rho_{vac} = 1 \times 10^{-27}$ J/m³.

6. Physical Interpretation

The U_g1 force mimics a long-range DPM Coulomb interaction mediated by quantum vacuum polarization at THz resonance frequencies. The Heaviside polarity in U_m ensures that Universal Magnetism only contributes when the vacuum asymmetry factor is positive (normal phase), switching sign at the UA→SCm phase boundary. The 26-quantum-state structure of N_quantum connects this module to the 26D polynomial framework of the Nineteen Astro Systems module (PAPER_489).
