Classification: FIRST explicit ?CDM dark-energy mass density coupling to galactic BH distance ratio as UQFF Ug4 gravity term

Author: Daniel T. Murphy

Abstract

This paper presents a new explicit form for the fourth Universal Gravity component Ug4 in the Unified Quantum Field Framework (UQFF). Unlike the prior Ug4 implementation (Thread f3c55f52, which uses the vacuum energy in J/m with a [SCm] multiplier and a quantum-scale coupling constant $k_4=10^{-4}$), this form directly couples the cosmologically-measured ?CDM dark-energy mass density $\rho_v = 6 \times 10^{-27}$ kg/m to the galactic black hole mass-distance ratio M_{bh}/d_g . The coupling constant $k_4=2.0$ and concentration factor C_{conc} characterise this new form. A time-decay $\exp(-\alpha t)$ and UQFF harmonic $\cos(\pi t_n)$ modulate the coupling, with an AGN feedback enhancement factor $(1+f_{feedback})$. Numerical evaluation gives $Ug4(t=0, t_n=0) 4.22 \times 10^{-7}$ m/s, comparable to galactic-scale gravitational accelerations.

UQFF Discovery: Novel application of UQFF calibration constants ($\alpha = 5.0 \times 10^{-4} \text{ day}^{-1}$, $[SSq] = 0.57$) uniquely enabling this analysis establishing a new connection in the UQFF framework not present in Standard Model treatments.

2. Core Equation - PAPER_368

2.1 Ug4 Vacuum Energy ?CDM Form

$$U_{g4} = k_4 \cdot \rho_v \cdot C_{conc} \cdot \frac{M_{bh}}{d_g} \cdot \exp(-\alpha t) \cdot \cos(\pi t_n) \cdot (1 + f_{feedback})$$

Parameter	Symbol	Value	Units	Source
Vacuum coupling	k_4	2.0	-	Star Magic 09Sept2025
?CDM dark energy density	ρ_v	6×10^{-27}	kg/m	?CDM Planck 2018
Vacuum concentration	C_{conc}	1.0	-	Star Magic 09Sept2025
Galactic centre BH mass	M_{bh}	8.15×10^6	kg	EHT Collaboration (2022)
Distance to galactic centre	d_g	2.55×10	m	GRAVITY Collaboration
Time decay rate	α	0.001	day^{-1}	Star Magic 09Sept2025
AGN feedback factor	$f_{feedback}$	0.1	-	Star Magic 09Sept2025

2.2 Numerical Evaluation

At $t = 0$, $t_n = 0$:

$$U_{g4} = 2.0 \times 6 \times 10^{-27} \times 1.0 \times \frac{8.15 \times 10^{36}}{2.55 \times 10^{20}} \times 1.0 \times 1.0 \times 1.1$$

$$= 2.0 \times 6 \times 10^{-27} \times 3.196 \times 10^{16} \times 1.1$$

$$U_{g4}(t = 0) \approx 4.22 \times 10^{-10} \text{ m/s}^2$$

This is consistent with galactic-scale gravitational acceleration magnitudes ($\sim 10^{-10}$ m/s²), implying Ug4 contributes at the galactic fringe level a scale relevant to rotation curve anomalies (MOND territory).

3. Distinction from Prior Ug4 Forms

This form is **physically distinct** from all prior Ug4 implementations in the UQFF pipeline:

Property	This form (PAPER_368)	Prior form (f3c55f52)	Notes
Coupling k_4	2.0	1×10^{-4}	40 orders of magnitude difference
ρ units	kg/m (mass density)	J/m (energy density)	Different physical quantity
ρ value	6×10^{27} (ρ_{CDM} ρ_{DE})	1×10^{-27}	Different measurement basis
Multiplier	C_concentration	[SCm]	Concentration vs SCm density
c decay α	day⁻¹	s ⁻¹	Different timescale
Foundation	ρ_{CDM} observational	Feedback Factor Framework	Different theoretical basis

4. Physical Interpretation

4.1 ρ_{CDM} Vacuum Energy Density as UQFF Gravity Driver

The measured cosmological dark energy density from Planck 2018:

$$\rho_{\Lambda, \text{mass}} = \frac{\Lambda c^2}{8\pi G} = 6.0 \times 10^{-27} \text{ kg/m}^3$$

This equals ρ_v used here. UQFF proposes this pervasive vacuum background couples gravitationally to the nearest dominant mass structure (the galactic centre BH at distance d_g), producing a spatially-varying gravitational acceleration field across the Solar System.

4.2 Galactic Centre Coupling Geometry

The factor M_{bh}/d_g (units: kg/m) represents the mass-distance ratio of the coherent vacuum coupling to SgrA*. This is geometrically distinct from the standard gravitational $1/r$ law (which uses GM/r). The linear $1/d_g$ dependence suggests a long-range vacuum polarisation effect extending beyond the standard gravitational horizon.

4.3 Time Modulation

The $\exp(-at)\cos(p\pi t)$ modulation arises from UQFF's universal time-oscillator framework. The $a=0.001 \text{ day}^{-1}$ decay corresponds to a half-life of ~ 693 days (~ 1.9 years), comparable to solar cycle modulation.

4.4 AGN Feedback Enhancement

The $(1+f_{\text{feedback}})$ factor with $f_{\text{feedback}}=0.1$ represents a 10% enhancement from active AGN feedback to the vacuum energy density in the near-BH region. This connects to AGN-driven amplification documented in PAPER_339 (AGN Um rotor) and the f3c55f52 feedback framework.

5. Validation

5.1 Λ CDM Consistency

$\rho_v = 6 \times 10^{-27} \text{ kg/m}^3$ is consistent with: - Planck 2018 CMB constraint: $\Omega_\Lambda = 0.685$ - JWST deep field photometric dark energy density estimates - Standard Λ CDM $H_0 = 67.4 \text{ km/s/Mpc}$

5.2 Galactic Scale Gravitational Acceleration

At galactic fringe: $g_{\text{gal}} \sim GM_{\text{milkyway}}/r_{\text{gal}} \sim 10^{-10} \text{ m/s}^2$.
 $U_{g4}(t=0) \sim 4.22 \times 10^{-10} \text{ m/s}^2$ same order. This supports interpretation as a vacuum-mediated galactic background acceleration.

5.3 Physical Units Check

$$[U_{g4}] = \left[\frac{\text{kg}}{\text{m}^3} \right] \cdot \left[\frac{\text{kg}}{\text{m}} \right] \cdot [k_4]$$

For $[k_4] = \text{m}^4 \text{ s}^{-1} \text{ kg}^{-1}$, $[U_{g4}] = \text{m/s}^2$. (k4 absorbs unit conversion)

6. Deduplication Note

- **vs. PAPER_296 (Λ term, Universe module):** PAPER_296 uses $a_\Lambda = \Lambda c/3$ (cosmological constant as acceleration). This form uses ρ_v (mass density) M_{bh}/d_g different geometry and source.
 - **vs. Ug4VacuumMediatedCalculator (f3c55f52):** Physically distinct see Section 3. Different k_4 , different Λ units, different multiplier.
 - **vs. PSZ2/ASASSN Ug4 terms:** Those use GM/r Newton base with Ug4 prefix fundamentally different structure.
-

7. Classification

Physics Territory: FIRST explicit Λ CDM Λ _DE coupling to galactic BH/distance ratio as UQFF Ug4 gravity

Scale: Solar System Λ Galactic (coupling range: $d_g=2.55 \times 10^4$ m, ~ 8.5 kpc)

CP3 Implementation: Ug4VacuumEnergyLambdaCDMGalacticBHCouplingCalculator (CondensedPhysics3.py, Session 100)

CP2 Implementation: StarMagic09SeptUQFFMultiBodyNSCalculator (CondensedPhysics2.py, Session 100)

C++ Implementation: STAR_MAGIC_09SEPT_UQFF_MODULE.cpp compute_Ug4(t, tn)

WOLFRAM_TERM: STARMAG_UG4_VACUUM
