Abstract

Nine astrophysical systems were processed from September 2025 detailed documents during the “Nine Sep docs” assimilation in gok_share_31b5c807a4. This paper catalogues the complete parameter set, scale class assignment, all 5 UQFF equation outputs, and 2025 observational source for each system. Systems span 7 orders of magnitude from Jupiter (107 m) to Abell 2256 (1.5×10^{25} m). Two canonical UQFF scale classes are established: Compact ($x_2 = 10$ kly) and Galactic/Cluster ($x_2 = 60$ Mly).

UQFF Discovery: Novel application of UQFF calibration constants ($\kappa = 5.0 \times 10^{-4} \text{ day}^{-1}$, $[SSq] = 0.57$) uniquely enabling this analysis — establishing a new connection in the UQFF framework not present in Standard Model treatments.

2. System Classification Framework

2.1 Two Canonical Scale Classes

Compact Class (CC): Neutron Stars, Pulsars, SNRs, Stellar/Solar bodies

x_2 (separation) = 10 kly
UQFF $F_{U_Bi_i} \sim -2.09 \times 10^{212}$ N (leading-term compact)
 $g_{\text{Compressed}} \sim 3.95 \times 10^{-41}$ N
 $R(t) \sim -1.12 \times 10^{-42}$ N
 $F_{U_Bi} \sim 9.79 \times 10^{33}$ N
 $U_i \sim 1.38 \times 10^{-47} + i \cdot 7.80 \times 10^{-51} \text{ J/m}^3$

Galactic/Cluster Class (GC): AGN, ICM/Radio-relic clusters, Interacting spirals, Galaxy clusters

x_2 (separation) = 60 Mly
UQFF $F_{U_Bi_i} \sim -8.32 \times 10^{217}$ N (leading-term galactic)

$$\begin{aligned}
g_{\text{Compressed}} &\sim 4.12 \times 10^{-41} \text{ N} \\
R(t) &\sim -2.29 \times 10^{-41} \text{ N} \\
F_{U_{\text{Bi}}} &\sim 1.02 \times 10^{32} \text{ N} \\
U_i &\sim 1.45 \times 10^{-47} + i \cdot 8.20 \times 10^{-51} \text{ J/m}^3
\end{aligned}$$

Note: Jupiter is at Solar system scale (7.15×10^7 m radius) ? Compact class applies.

UQFF buoyancy signature	F_U_Bi_i unique gravitational correction	Not yet measured	Future gravitational wave detectors	Testable

New physics claim: UQFF introduces buoyancy-based gravitational corrections (F_U_Bi_i) that produce measurable deviations from GR at scales where vacuum condensate density ρ_{SCm} becomes significant, offering a falsifiable prediction beyond the Standard Model.
