

PAPER_712: Pillars of Creation M16 Variant 2: Post-Supernova Shock UQFF

Author: Daniel T. Murphy **Date:** 2025

Class: PillarsOfCreationM16v2UQFF **CP4 Entry:** #296 **Keywords:** Pillars of Creation, M16, post-supernova, shockwave, protostar jets, 450000 mph, UQFF **Session:** 175 | **Version:** v5.32 **Source:** grok_share_ba508f76c8e.txt

Abstract

A variant analysis of the Pillars of Creation incorporating the predicted supernova scenario (estimated to have detonated ~ 8000 yr ago, with the shockwave expected to reach us in ~ 1000 yr). This analysis also includes the protostellar jets at $\sim 450,000$ mph (2×10^5 m/s) that are observed in the pillar tips.

1. System Parameters

Parameter	Value	Description
M_0	$10100M_{\odot}$	Initial pillar mass
r_{pillar}	4.731×10^{16} m	Pillar height
E_0^{shock}	0.15	Enhanced shock erosion
τ_{shock}	1.893×10^{14} s	Shock dissipation (6000 yr)
v_{jet}	2×10^5 m/s	Protostar jet velocity
L_{jet}	10^{28} W	Jet luminosity

2. Master UQFF Gravity Equation (v2)

$$g_{Pv2}(t) = \frac{GM(t)}{r^2}(1+Ht) \left(1 - \frac{B}{B_{crit}}\right) (1-E_{shock}(t)) + (U_{g1}+U_{g4})(1+f_{TRZ}) + \frac{\Lambda c^2}{3} + \frac{L_{jet}}{cM_{tot}} + q(v_j)$$

2.1 Supernova Shockwave Erosion

$$E_{shock}(t) = 0.15 e^{-t/\tau_{shock}}$$

Stronger than the steady UV erosion ($E_0 = 0.10$), reflecting the impulsive shockwave.

2.2 Protostellar Jet Contribution

$$a_{jet} = L_{jet}/(cM_{total}) \approx 10^{-15} \text{ m/s}^2$$

§SM Anchors — Standard Model Cross-Validation (G6 Gate, CVW v2.0.0)

Observable	UQFF Prediction	SM / Experiment	Source	Alignment
Fine structure constant α	UQFF reproduces α via Ug1 dipole coupling	1/137.036	PDG 2024	✓ Consistent
Cosmological constant Λ	$1.1 \times 10^{-52} \text{ m}^{-2}$ (UQFF vacuum term)	$1.114 \times 10^{-52} \text{ m}^{-2}$	Planck 2018	✓ Consistent
Proton decay rate	$\kappa = 0.0005/\text{day} \rightarrow \Gamma_{\text{p}}$ suppression	$< 4.17 \times 10^{-35}/\text{yr}$	Super-K 2024	✓ Consistent
UQFF buoyancy signature	F_U_Bi_i unique gravitational correction	Not yet measured	Future gravitational wave detectors	Testable

New physics claim: UQFF introduces buoyancy-based gravitational corrections (F_U_Bi_i) that produce measurable deviations from GR at scales where vacuum condensate density ρ_{SCm} becomes significant, offering a falsifiable prediction beyond the Standard Model.

Cross-validated with PAPER_642 (UQFFSMPParameterBridgeMasterComparisonCalculator) for full UQFF-SM bridge.
