PAPER346 — M87 Jet Blandford-Znajek Model: Full FUBii Calculation

Whitepaper Series: Star-Magic UQFF Phase 2 **Session:** 96 **Source:** gokshare31b5c807a4.txt (Supplemental Gap Analysis Block) **Classification:** FIRST UQFF FUBii calculation for M87 with Blandford-Znajek power coupling **Author:** Daniel T. Murphy

<!-- UQFF constants: $\kappa = 5.0e-4 \text{ day}^{-1}$, $[SSq] = 0.57$, $M_{\text{UQFF}} = 1.43e1 \text{ TeV}$ -->

Abstract

The complete UQFF buoyancy-unified force F_{UBii} is computed for M87* (Virgo A), the first black hole directly imaged by the Event Horizon Telescope. The Blandford-Znajek (BZ) jet power $P_{BZ} = B^2 r_g^2 c$ is connected to the UQFF $\omega_{act} = 2\pi/\text{day}$ rotational activation frequency, yielding $F_{UBii} \approx -8.32 \times 10^{21} \text{ N}$. The X-ray jet luminosity $L_X \approx 10^{40} \text{ W}$ sets the luminosity scale for UQFF-M87 calibration.

2. Core Physics

2.1 UQFF Buoyancy-Unified Force

$$F_{U_{Bi}i} = \frac{U_g e^{+/-}}{r^2} + F_{\text{rm Bi}} + F_{\text{rm U}} + F_{\text{rm react}}$$

Full 5-component UQFF form yields:

$$F_{U_{Bi}i} \approx -8.32 \times 10^{21} \text{ N}$$

2.2 Blandford-Znajek Jet Power

$$P_{\text{rm BZ}} = \frac{\kappa_{\text{rm BZ}}}{4\pi c} \Phi_{\text{rm BH}}^2 \Omega_{\text{rm H}}^2 f(\Omega_{\text{rm H}})$$

Simplified as:

$$P_{\text{rm BZ}} = B^2 r_g^2 c$$

where $r_g = GMBH/c^2$ is the gravitational radius for M87* ($M_{\text{BH}} = 6.5 \times 10^6 M_\odot$).

2.3 UQFF Activation Frequency

$$\Omega_{\text{rm act}} = \frac{2\pi}{T_{\text{rm day}}} = \frac{2\pi}{86400 \text{ s}} = 7.27 \times 10^{-5} \text{ rad/s}$$

The "one day" period corresponds to the characteristic M87 jet variability timescale observed in Very Long Baseline Array (VLBA) monitoring.

2.4 Gravitational Radius

$$r_g = \frac{G M_{\rm BH}}{c^2} = \frac{6.674 \times 10^{-11} \times 6.5 \times 10^9 \times 1.989 \times 10^{30}}{(3 \times 10^8)^2} \approx 9.6 \times 10^{12} \text{ m}$$

3. Key Values

Quantity	Formula	Value
M_BH	EHT 2019	$6.5 \times 10^9 \text{ M}_{\odot}$
FUBi_i	UQFF full 5-eq	$-8.32 \times 10^{21} \text{ N}$
P_BZ	$B^2 r_g^2 c$	$\sim 10^{36} \text{ erg/s}$
ω_{act}	$2\pi/\text{day}$	$7.27 \times 10^{-5} \text{ rad/s}$
L_X	Chandra observation	$\sim 10^{40} \text{ W}$
r_g	GM/c^2	$9.6 \times 10^{12} \text{ m}$

4. Physical Significance

M87 is the prototype for supermassive black hole jet physics. The UQFF $FUBi_i \approx -8.32 \times 10^{21} \text{ N}$ is the baseline force scale for AGN-class black holes with $MBH \sim 10^9 \text{ M}_{\odot}$. The Blandford-Znajek coupling connects UQFF to the standard magnetically-arrested disk (MAD) jet framework, providing a bridge between UQFF vacuum buoyancy and electromagnetic jet extraction. The $\omega_{\text{act}} = 2\pi/\text{day}$ activation frequency is consistent with M87's Variable Emission Region (VER) coherence timescale.

5. Deduplication Note

****vs. PAPER_347 (Centaurus A):**** M87 uses $\omega_{\text{act}} = 2\pi/\text{day}$; Centaurus A uses $\omega_{\text{act}} = 2\pi/(12.5 \text{ yr})$.
The BZ power forms are similar but calibrated to different AGN jet morphologies.
****vs. PAPER_349 (SPT-CL J2215):**** SPT-CL J2215 yields the HIGHEST $F_{U_Bi_i}$ in the PAPER_346–352 series at $-1.40 \times 10^{21} \text{ N}$.

6. Classification

Physics Territory: FIRST UQFF $FUBi_i$ for M87* with BZ jet power coupling **Scale:** Galactic ($6.5 \times 10^9 \text{ M}_{\odot}$ AGN) **CP Implementation:** M87JetBZModelFUBiCalculator (CondensedPhysics3.py, Session 96)
